

Technical Inspection of**Backies WTW****Date of Inspection****Date 26-Oct-16****DWQR Staff Present**

Moira Malcolm

Scottish Water Staff Present (& Titles)

Iain Ogilvie, Neil Brennan, Gary Geddes,

Summary of Inspection

Backies WTW is a small membrane plant which serves Golspie and surrounding area in Sutherland. Water quality produced is generally excellent. The process consists of conditioning and coagulation pre-treatment, ultrafiltration membrane then disinfection, which is generally a robust process for the type of raw water encountered. Contact time for disinfection is very short. The process is operating well and the plant is well managed. The works is clean and tidy and staffing is adequate.
