

## Turriff WTW Risk Based Audit June 2025

**Turriff WTW is a medium sized works serving Turriff and the coastal towns of north Aberdeenshire. It also supplements the wider network in Moray when demand is high. Turriff WTW is subject to a DWQR Enforcement Notice due to the incapacibilities on site for removal of *Cryptosporidium* from the treatment process. This has been mitigated by the addition of UV treatment, but many issues remain and the Enforcement Notice is still in place, with a new works anticipated in 2030. The site has a number of both asset and management related issues that will both require attention to ensure that Turriff can produce compliant water until the new site is in place.**

DWQR identified nine findings. Proposed interventions to address DWQR's findings, along with completion dates and any interim mitigations that will be put in place have been agreed with Scottish Water.

DWQR will monitor completion of agreed interventions, and may request evidence of completion or re-visit the site.
