Summary of Inspection

Overall Summary

Stoneybridge WTW is a small works serving the south of South Uist and Eriskay. Stoneybridge WTW has experienced a number of water quality events and incidents over the last three years. Investment has now been promoted and is underway to address many identified issues.

The purpose of this visit was primarily as a fact-finding mission to examine the processes at Stoneybridge WTW in detail including associated documentation (actions tracking, DWSP, disinfection strategy, and WOSP) and review previous events and incidents.

This visit was originally scheduled for March 2020 but postponed due to the pandemic.
