

Drinking Water Quality Regulator
for Scotland

Technical Audit Summary

Daer WTW Targeted Manganese Management 22nd October 2025

The purpose of this audit was to determine Scottish Water's management of manganese at Daer WTW and in its catchment.

DWQR identified nine findings. Proposed interventions to address DWQR's findings, along with completion dates and any interim mitigations that will be put in place have been agreed with Scottish Water.

DWQR will monitor completion of agreed interventions, and may request evidence of completion or re-visit the site.
